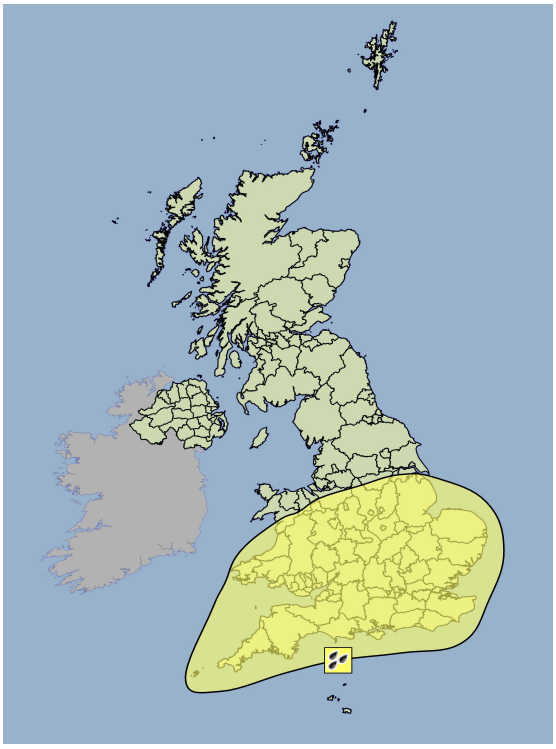
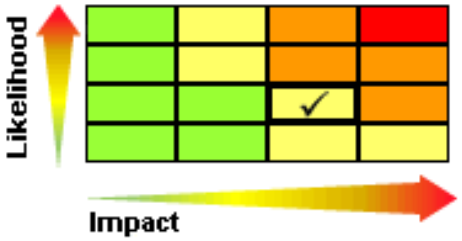
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure developing over Biscay pushes into southern UK during early Thursday before tracking further northwards to be centred near or just east of Scotland by Friday afternoon. With very warm air being entrained into the system, locally heavy and thundery rain is expected to develop and affect parts of England and Wales during Thursday. 20 or 30 mm of rain may fall in a relatively short space of time in some places whilst locally in excess of 50 mm is possible in just a few hours.

The development of this system is relatively complex therefore the exact locations of the heaviest rainfall remain uncertain. Further updates to this warning may occur during the early hours of Thursday or Thursday morning when the location of where heaviest rain is most likely becomes more apparent.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **01:00 on Thu, 13th Aug 2015** until **23:59 on Thu, 13th Aug 2015**

A developing area of heavy and thundery rain is expected to reach southern England during the early hours of Thursday before pushing further northwards during the day. There is the potential for torrential downpours in places.

The public should be aware of a significant risk of localised disruption due to surface water flooding. Lightning and hail are likely to be additional hazards.
